Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al. (U.S. 6,699,177) in view of Ferre et al. (U.S. 6,738,656). Wang et al. teaches a surgical robotic system including a processor 46; a robotic manipulator 26 having a tool holder 45, the manipulator 26 moving the holder 45 in response to signals from a processor; a tool 82 having a surgical end effector 90/91; and an adapter 98 coupling the tool 82 to the holder 45, the adapter 98 maintaining sterile separation between the tool 82 and the holder 45. Hence Wang et al. teaches all of the limitations of the present invention except first and second sensors which transmit first and second signals to the processor from a magnetic switch that is magnetically actuated by a magnet of the tool.

Ferre et al. teaches a system including first and second sensors 78 which transmit first and second signals to the processor from a magnetic switch that is magnetically actuated by a magnet 80 of the tool 60. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have included sensors in the adapter of Wang et al. which transmitted signals to the processor from the magnet

on the tool to identify which of a plurality of medical instruments is attached to the adapter. "Knowing the identity of the attached medical instrument permits the system of automatically adjust the position detection unit to compensate for differences in instrument tip position with respect to the position of the sensors for a variety of medical instruments." (lines 26-31 of column 6)

Allowable Subject Matter

Claims 22-26 and 31-33 are allowed.
